

## Photovista® Panorama 3.02 Patch for Windows

### Welcome to iseemedia Photovista Panorama 3.02!

This is an update to the world's #1 panoramic stitching program. Periodically, iseemedia makes updates to its programs to fix some known issues or address small improvements in functionality and makes these available in the form of a patch. In order to be able to use this patch, you must have installed a full version of Photovista Panorama 3.0 on your system.

Please read the details below to find out what has been updated and improved.

- The **Disable Warping** optional setting from the Settings menu has been re-enabled. This option allows users to stitch a 360° (3D) unwarped panorama.
- In version 3.0, when a lens setting was changed, any images there were rotated were reset to their original alignment. In version 3.02, image alignment is unchanged when changing a lens setting.
- The Photovista manual has been updated to include information on vertical stitching, and selecting between 2D and 3D stitching.
- The "Preview HTML" page generated by Photovista when previewing panoramas links to the iseemedia website.
- Other known issues affecting Photovista's performance, speed and shortcut keys have been fixed.
