

## Photovista® Virtual Tour 3.0 Facts and Features

**Photovista® Virtual Tour** is an easy-to-use, complete suite of programs for creating interactive virtual tours for the web complete with moving panoramas, images, audio and navigation “hotspots”. The goal of Photovista Virtual Tour 3.0 is to empower users to easily create image based virtual tours for viewing on the Internet.

### OVERVIEW

Photovista Virtual Tour 3.0 consists of the following programs:

#### **Photovista Panorama 3.0**

Create 360°, high-resolution, moving panoramas that site visitors can zoom and pan to move from one room or scene to another.

#### **Vista Organizer **NEW!****

The fastest and easiest-to-use, full-featured media editor available for Windows. Designed to help users manage, edit and share their photos, videos, audio files and 360° panoramas.

#### **Virtual Tour Maker**

Easily create, add and remove hotspots that link panoramas, images and Web pages to create your online tour. You can even add multiple hotspots to several different locations.

#### **Vista Works **NEW!****

Easily preview and edit your virtual tour into an HTML page with this full-featured yet simple HTML editor. Comes with several preset HTML templates to work from and lets you customize text, images, links and layout of your HTML page and virtual tour.

- Ready for web publishing feature
- Web page design using a WYSIWIG interface
- Project library to organize components such as web pages, images and tours
- Full text editing capability (source code)
- Hyperlink support
- Support for integrating web page tables

## **COMMERCIAL EDITION OF PHOTOVISTA VIRTUAL TOUR 3.0**

For the full Photovista Virtual Tour commercial edition details see the Photovista and Photovista Virtual Tour commercial editions licensing at:  
[www.iseemedia.com/customerService/cs\\_resources.html](http://www.iseemedia.com/customerService/cs_resources.html)

### **Who is the Commercial Edition for?**

Commercial websites that use the iseemedia Java Viewers have to purchase a commercial edition of the product (which includes a commercial Java Viewer license and editing application) in order to continue using the Java Viewers for their commercial website.

Upgrade discounts are applicable for current users of Photovista Panorama 3.0, Photovista Virtual Tour 1.0 and Photovista 3D Objects 1.0. The regular Java viewers are included in the standard editions of these products. Standard edition Photovista products come with Java Viewers that are for use on non-commercial, not for profit, educational and personal websites.

**Websites using standard iseemedia Java Viewers that **require** a commercial edition license include:**

1. **Any active commercial website.** A commercial website is defined as a website whose primary purpose it is to promote the sale of goods or services.

For example:

- A real estate agent wanting to display panoramas of properties for sale on a website
- A site selling cars displayed as 3D objects
- A commercial photographer which is selling panoramic pictures or other images (stock photography) on a website

2. **Virtual tour operator website.** Any website using the iseemedia Java Viewers whose business is the selling of content creation services, bundle solutions (hardware/software) or the promotion of virtual tours, panoramas, 3D objects and zoom images for their clients.

For example:

- Virtual tour companies that create virtual tours for use by their clients in their travel or real estate websites will need to buy at least 1 commercial license. If a virtual tour operator site has 25 clients and is creating panoramas for them, you need only 1 commercial license.
- Companies that make virtual tours for many different vertical markets.

A commercial license gives the right to the buyer to confer to a 3<sup>rd</sup> party client the use of customized Java Viewers that were created under a commercial license but not the right to distribute or sell the commercial license and package itself to a client.

**What is included in the Commercial Edition?**

Photovista Virtual Tour 3.0 Commercial Edition includes, in addition to the regular software package, the following viewer tools:

- vuForge, a Java Viewer customization tool. This allows users to customize the look and feel of the toolbar, remove buttons and alter the splash screen.
- Sample UI skins
- Online help manual
- Commercial Java Viewer license EULA (end user license agreement)
- Free account membership registration to [www.MyPhotovista.com](http://www.MyPhotovista.com). MyPhotovista.com has tips and tricks and lots of other information related to panoramas.
- Free updates and maintenance. New tools, like batch conversion, flash applet, 3.02 updates to vuForge and viewers as well as updates to the main Photovista product line. This does not include upgrades to a whole new version of the software. Only interim releases (3.01, 3.02, etc.).
- Guaranteed participation to beta testing list for new product releases.
- Unlimited number of panoramas or images displayed. No per image license fee and an unlimited number of Java Viewers can be used on web pages (limit of 15 multiple domain addresses under the same

management can use the commercial Java license without requiring an additional license).

- Access to the iseemediia knowledge base on the iseemediia website (upon registration).
- User forum access on the iseemediia website (upon registration).
- Free email support up to 20 separate incidences concerning the Viewer or the vuForge product. (Pay per incident structure in effect over this number)
